

MOHAMED KHALED AHMED

Project ccna

Step 1: Project Overview

- This project is a full practical implementation of CCNA topics.
- Covers topology design, basic configuration, VLANs, routing, ACLs, and more.

Step 2: Building the Network Topology

- The network includes multiple routers and switches.
- Devices are named based on names (S1, S2, R1...).
- A consistent domain name is used across the network: ITI.com.

Step 3: Basic Device Configuration

- Assign custom hostnames to routers and switches.
- Set line passwords (Console and VTY).
- Encrypt all passwords for security.
- Enable SSH-only remote access.
- Create a local username with password for authentication.

Step 4: VLAN Configuration

- VLANs are created and assigned to specific ports:
 - SW1: VLANs 10, 20, 30
 - SW2: VLANs 40, 50, 60
- Each VLAN is mapped to a group of interfaces.
- Rapid Spanning Tree Protocol (RSTP) is enabled to prevent loops.

Step 5: DHCP Configuration

- DHCP is configured on the router to assign IPs dynamically.
- A separate DHCP pool is created for each VLAN.
- All subnets use Class C (/24) subnet masks.
- Each pool includes:
 - IP network
 - Default gateway
 - DNS server: 192.168.7.10
- An additional pool is configured for SW4 using 10.10.50.0/24.

Step 6: Routing Configuration

- A dynamic routing protocol (e.g., EIGRP) is implemented.
- Two routers are connected via a serial cable and use a default route.
- A minimum of 3 routers are part of the routing domain.

Step 7: RADIUS Server Integration

- A RADIUS server is added for centralized authentication.
- All login attempts are authenticated through the RADIUS server.

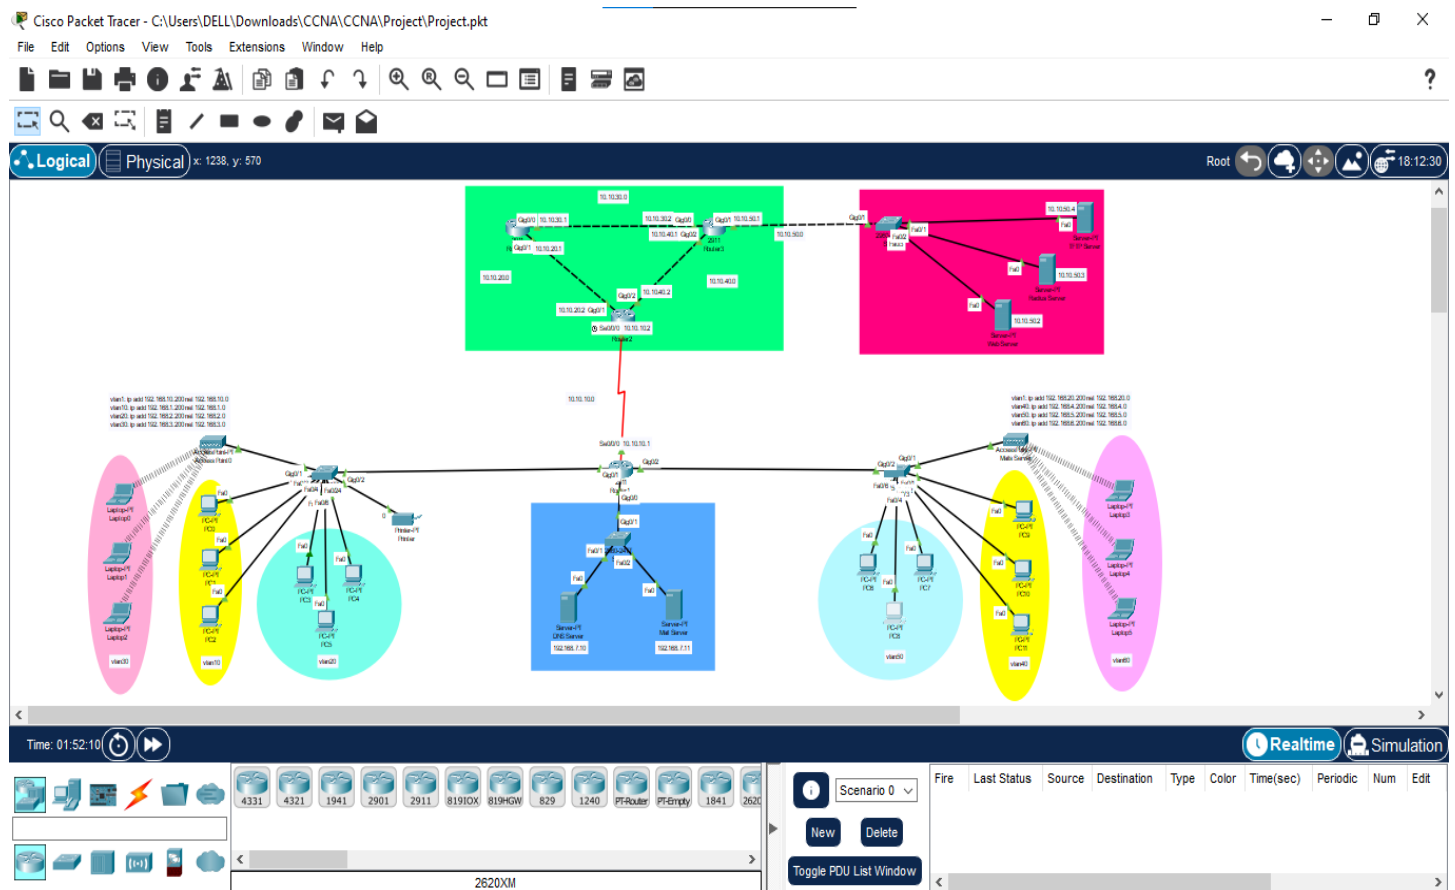

Step 8: Access Control Lists (ACLs)

- Block the host 192.168.1.2 from using DNS services.
- Deny the entire subnet 192.168.3.0/24 from accessing the web server.
- Prevent VLAN 10 users from accessing the Mail Server.

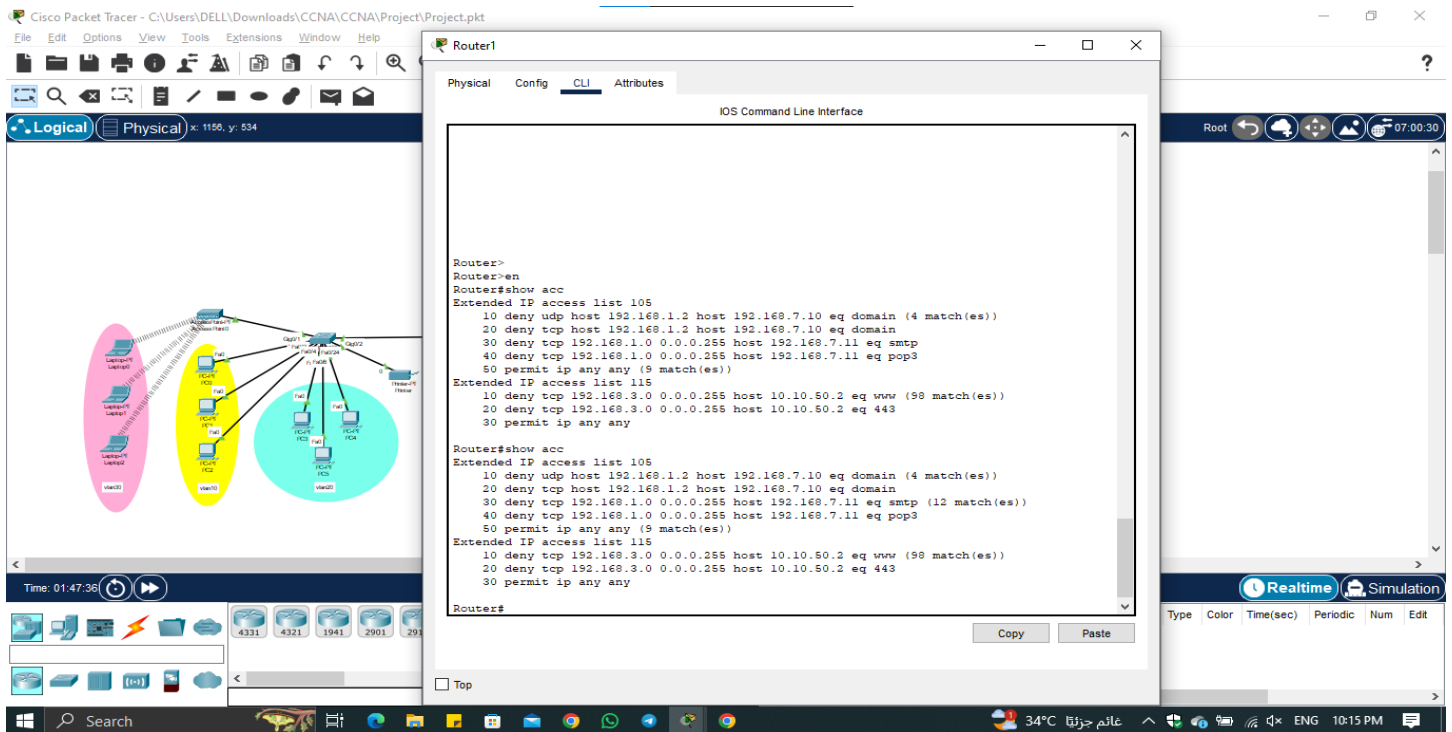

Step 9: Final Notes

- The project applies essential CCNA-level technologies.
- Provides hands-on practice using Cisco Packet Tracer.
- Suitable for training, exams, or graduation project presentations.

Telnet not enabled in Switch and Router

SSH enabled in Switch

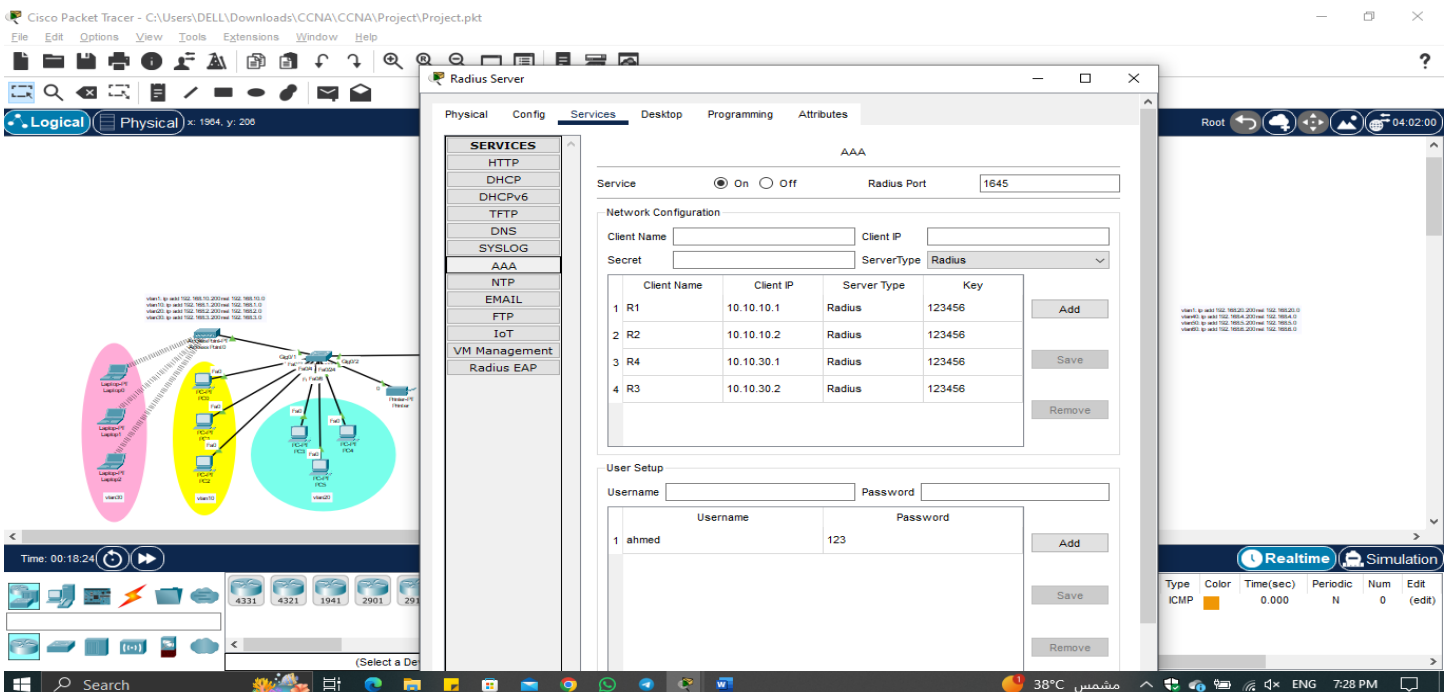

SSH enabled in Router

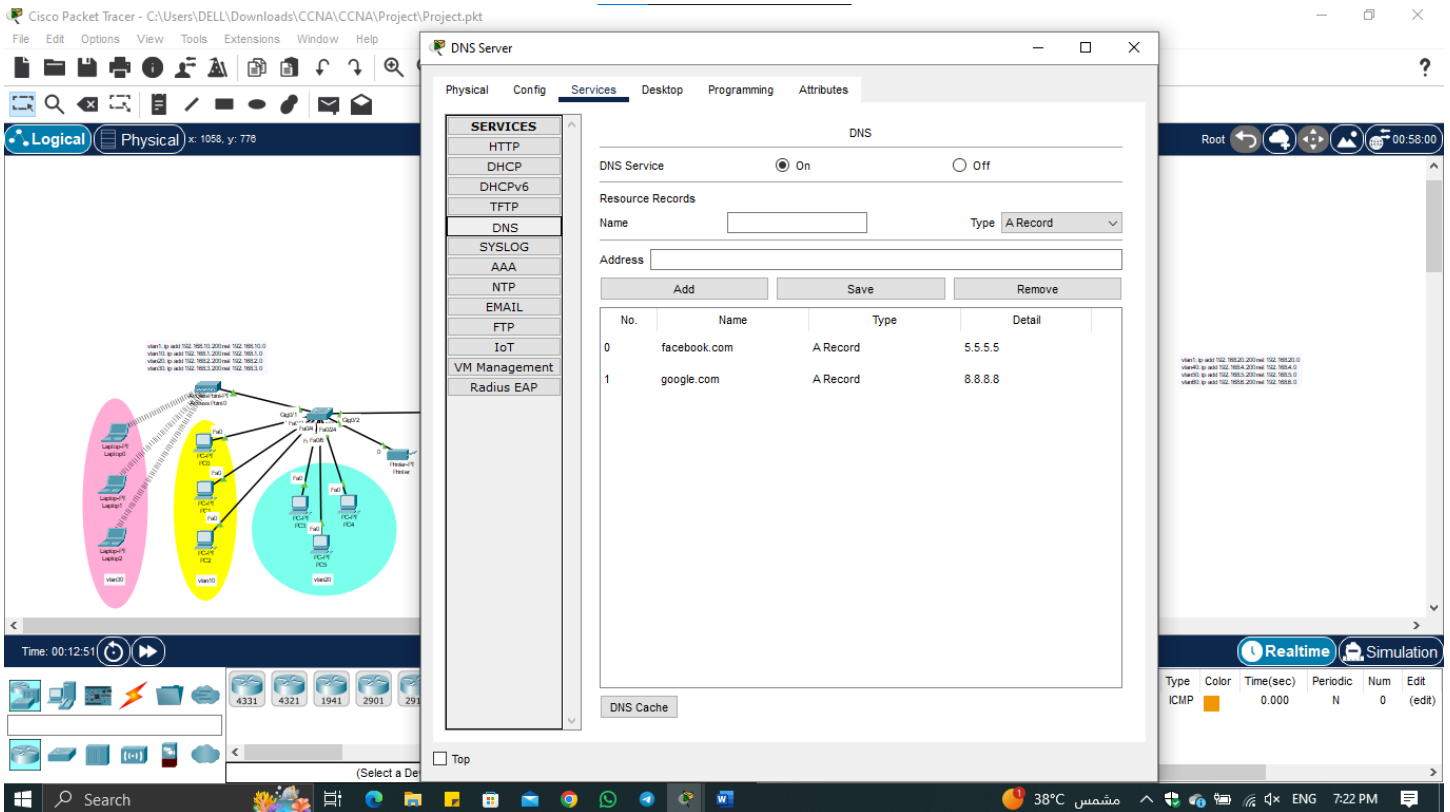

Radius enabled (AAA)

```
mohamed(config)#ser password-encryption
mohamed(config)#line v 0 15
mohamed(config-line)#t
mohamed(config-line)#transport i
mohamed(config-line)#transport input s
mohamed(config-line)#transport input ssh
mohamed(config-line)#login local
AAA is enabled. Command not supported. Use an aaa authentication methodlist
```

DNS

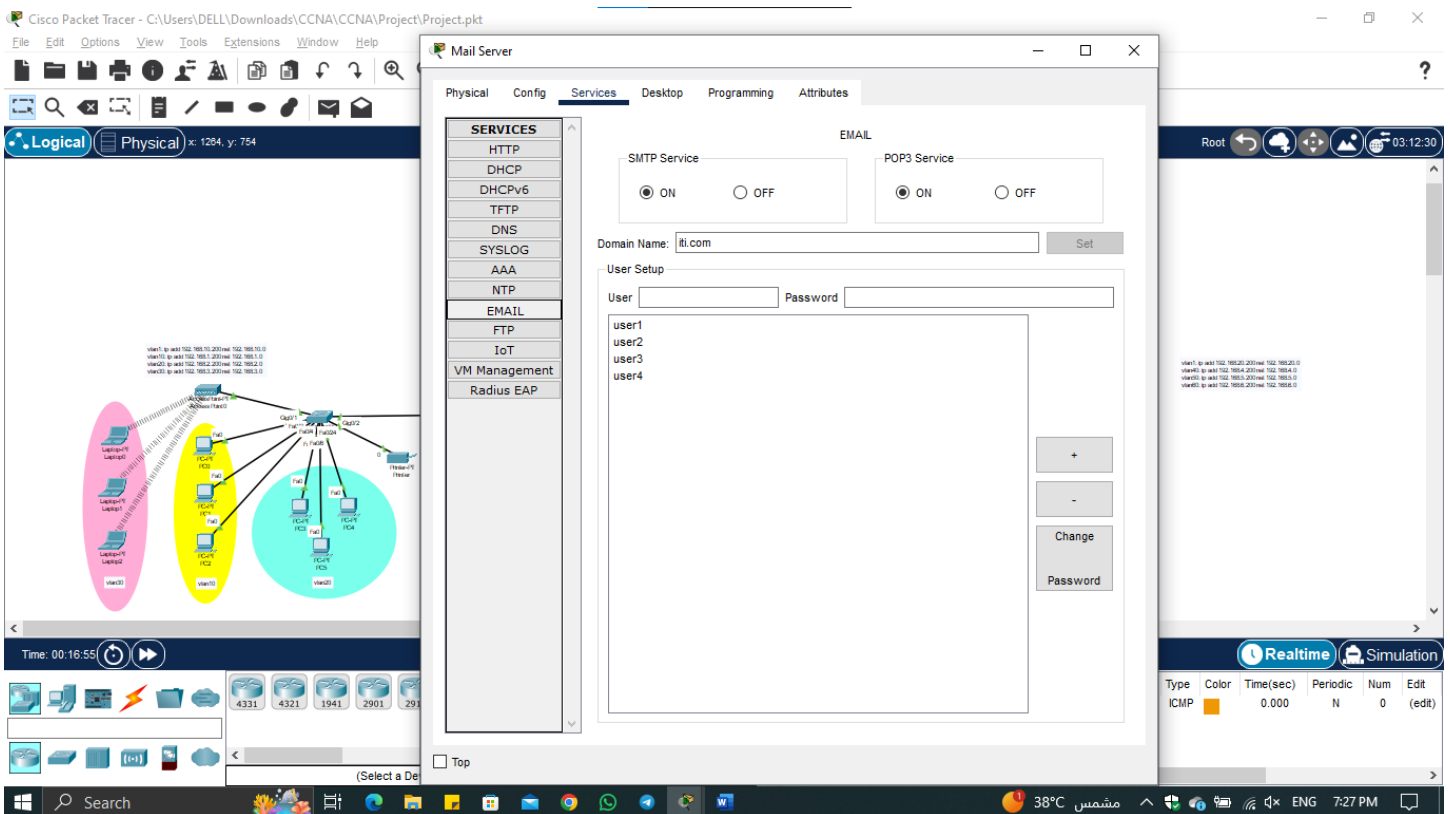

The screenshot shows the Cisco Packet Tracer interface with a network diagram on the left and the DNS Server configuration window on the right. The network diagram features a central router connected to three VLANs (pink, yellow, and blue) and a server. The DNS Server configuration window is set to the 'Services' tab, with the DNS Service turned 'On'. The 'Resource Records' table is populated with two entries:

No.	Name	Type	Detail
0	facebook.com	A Record	5.5.5.5
1	google.com	A Record	8.8.8.8

The bottom status bar shows the time as 00:12:51 and the temperature as 38°C.

Email

The screenshot shows the Cisco Packet Tracer interface with the same network diagram on the left and the Mail Server configuration window on the right. The Mail Server configuration window is set to the 'Services' tab, with the SMTP Service turned 'ON' and the POP3 Service turned 'OFF'. The 'Domain Name' is set to 'iti.com'. The 'User Setup' section lists four users: user1, user2, user3, and user4. The bottom status bar shows the time as 00:16:55 and the temperature as 38°C.
